INSIGHTS

- The Outpatient Department records the largest share of revenue compared to other departments.
- Periods of sharp increase of disease may be due to seasonal outbreaks .i.e. Flu., or external factors influencing patient visits and admission.
- Some diagnosis show a short hospital stay but higher pharmacy cost, reflecting the use of higher cost of medication over a short period of time. This reveals that length of stay is not directly proportional to pharmacy spending.
- Variation of diseases across counties reflects differences in environmental conditions, age of the population and population density. The ministry of health should allocate medication and staffing according to disease prevalence.
- The older age group demonstrate higher consumption of medication, reflecting age related conditions.
- Total Revenue by department and county; Inpatient department in Kiambu and Uasin Gishu generated highest revenue than other counties.
